School to Work
Baker High School offers a comprehensive vocational program to students. Any student may select classes in industrial and engineering systems (auto mechanics, small engines, drafting, building construction and woodworking), natural resources (ag and forestry), and family and consumer science. Several of the classes offered meet the requirements of the Tech Prep program and are thus eligible for dual credit through Blue Mountain Community College. In addition to the programs, several activities are offered which support the course goals. These include FFA, Forestry Club and Auto Club.

Business-School Partnerships

Baker High School had developed school-to-business relationships with several local businesses or agencies. The Health Research Occupation class provides students with an opportunity to shadow a multitude of health professionals. It's not unusual to find our students in an operating room or doctor's office. The transitional component of our special education program is directed by a vocational coordinator, who seeks work opportunities for our students.
